Salem Health

More than **2,600**
Americans die
of cardio-
vascular
disease each
day. That is an
average of **one**
death every
34 seconds.

American Heart
Association

Rapid heart rhythms account for the great majority of sudden cardiac deaths.

- Ventricular Fibrillation (VF) is the most common arrhythmia, or abnormal rhythm, that causes cardiac arrest.
- VF occurs when the heart's electrical impulses become erratic, abruptly disrupting the blood pumping action of the heart.
- Defibrillation, an electrical shock given to the heart, is the only known therapy for VF.

Every minute counts in the event of cardiac arrest!

Statistics show that survival rates drastically increase if an Automated External Defibrillator (AED) is used within 3 to 5 minutes of a sudden cardiac arrest.

Improve cardiac arrest survival with:

- ♥ Early Activation of 911
- ♥ Early CPR
- ♥ Early Defibrillation
- ♥ Early Advanced Care

An Automated External Defibrillator could save a life!

AED's are a valuable investment and asset to the Salem Community. The Salem Area Public Access Defibrillator Coalition would like to add your AED to a list of known AEDs. This information is entered into a database at the 9-1-1 Dispatch Center. This allows dispatchers to advise a 9-1-1 caller that an AED may be on-site at their emergency. In addition, this information is very important to emergency medical responders. Please visit www.cityofsalem.net to register your AED. Navigate to the Fire Department page and look for the link near the bottom. Or fax this form to 503-588-6202.
